

GIFTSHOP POS

[Customer Setup Guide](#) · [Windows / macOS / Android](#) · [Unsigned install workarounds](#) · [14-day trial](#) · [Payhip license](#) · [Feature manual](#)

Platforms	Windows (.exe) · macOS (.dmg) · Android (.apk)
Licensing	14-day trial → buy on Payhip → enter license key in app (same installer)
Signing	Builds may be unsigned — follow SmartScreen / Gatekeeper sections below

Welcome. Install the trial, use the POS for 14 days, then purchase on Payhip. Enter purchase email + license key in the app. You do **not** need a different paid binary — the key unlocks permanently. Re-download from Payhip only if you need the installer again.

1. Contents

- 2. Trial vs paid (same app)
- 3. Windows install & SmartScreen
- 4. macOS install, Gatekeeper & damaged-app fix
- 5. Android APK
- 6. Trial timer & activation
- 7. Payhip purchase & license key
- 8. First-Time Setup & Admin Login PIN
- 9. Master Reset Password
- 10. Register sales & receipts
- 11–12. Staff, inventory, vendors
- 13. Reports, History & P&L
- 14–15. Backups & security
- 16. Troubleshooting
- 17. Seller: Payhip, variations, GitHub Actions

2. Trial vs paid (same app)

- One installer for trial and paid use; licensing is inside the app.
- Trial: 14 days full features, then activation screen.
- After Payhip payment you receive a **license key** (email + Payhip library).
- Activate in-app with checkout email + key. Offline cache after first success.
- Re-download after paying is optional (lost installer / new PC) — not required just to unlock.

Paid unlock = license key, not a second unlocked EXE/DMG for customers.

3. Windows (.exe)

3.1 Install

- Download the .exe from the trial link or Payhip library.
- Run installer → allow UAC if asked → finish wizard → launch The Gift Shop POS.

3.2 SmartScreen (Windows protected your PC) — unsigned builds

Independent software without a Microsoft code-signing cert often triggers this. Safe if from the official seller link.

- Click **More info** → **Run anyway**.
- If Defender quarantined: Windows Security → Virus & threat protection → Protection history → Allow/Restore.
- Optional: right-click .exe → Properties → Unblock → Apply.
- Never install from random third-party mirrors.

4. macOS (.dmg)

4.1 Install

- Open the branded DMG → drag The Gift Shop POS onto the Applications shortcut → eject → open from Applications.

4.2 Unidentified developer (first launch only)

- The app is ad-hoc signed (not notarized), so macOS asks once. That is **normal** for trial builds.
- Easiest: **right-click The Gift Shop POS** → **Open** → click **Open** again.
- Or: System Settings → Privacy & Security → Open Anyway.

4.3 App is damaged / moved to Trash (unsigned quarantine)

This affects unsigned downloads only. The app clears its own Gatekeeper flag on the first successful launch, so this is normally a one-time step. If it still shows damaged:

```
xattr -cr "/Applications/The Gift Shop POS.app"
```

If the name differs: type `xattr -cr` then drag the app into Terminal. Then right-click → Open.

Universal DMG: the same DMG works on both Apple silicon (M1–M4) and Intel Macs.

5. Android (.apk)

- Enable Install unknown apps for your browser/Files.
- Open APK → Install → launch. Grant camera if using barcode scan.
- Debug APKs are for evaluation; Play Store release may come later.

6. Trial timer & activation

- First launch may show days remaining on the trial.
- Use register, inventory, reports during the trial.
- Buy / Activate opens the seller Payhip URL.
- After payment: enter email + license key → Activate → license cached offline.

7. Payhip purchase & license key

- Checkout with the email you will use for activation.
- Payhip emails the order and software license key (when license keys are enabled).
- Also check Payhip Library for key + installers + this PDF.
- In POS: paste email + key exactly (no extra spaces).
- Missing key: spam folder, Payhip library, contact seller with order number.

8. First-Time Setup & Admin Login PIN

- Fresh install default admin PIN is often admin123 — change it immediately.
- Welcome / First Time Setup: store name + new Admin Login PIN.
- After onboarding, pre-login setup entry is disabled (security).
- Admin → Store System & Audits → Admin Access Credentials: Admin Login Username and Admin Login PIN.

9. Master Reset Password (forgotten admin PIN)

Separate backup secret — not your daily Admin Login PIN. Set it while you still know the admin PIN.

Set:

- Store System & Audits → Master Reset Password (Backup — forgotten Admin PIN only).
- New password (6+ chars) + confirm + current Admin Login PIN → Save. Store offline.

If locked out:

- Login → Forgot admin PIN? Use Master Reset → enter master reset password.
- Admin PIN becomes temporary admin123 → sign in → change PIN immediately.
- Action is audit-logged; attempts are rate-limited.

10. Register sales & receipts

- Staff PIN → open register/float → scan/search → cart → tender (cash/card/split/FX).
- Each sale stores receipt number + timestamp in the transaction ledger.
- Reprint from Transaction History (thermal / A4).
- Refunds/voids need permission and appear in the security audit trail.

11–12. Staff, inventory, vendors

- Staff & Cashier Security: create cashiers, PINs, roles, access gates.
- Inventory: SKU, stock, VAT, brands, barcodes, CSV import.
- Vendors wholesale vs consignment; payouts and settlement reports.
- Price lists / registers for retail vs wholesale desks.

13. Reports, History & P&L

Transaction History

- Date from/to, search receipt/customer/cashier, sales/refunds/flagged, reprint, integrity check.
- Sales live here. Security audit log = exceptions only (not every sale).

Financial / P&L

- Presets: Daily, Week, This Month, Year, All Time.
- Date range, By month, By year — KPIs, Graphs, Pie, CSV all use the same period.
- Empty graphs: widen period or confirm sales exist in History.

14–15. Backups & security

- Export/restore database from Store System & Audits; optional auto-backup.
- Backups are sensitive (may include credentials).
- Change default PIN day one; set Master Reset; do not leave admin logged in on the floor.
- Protect license keys and Master Reset like passwords.

16. Troubleshooting

Issue	Try
Mac damaged/can't open	xattr -cr on .app; right-click Open; Open Anyway
Windows SmartScreen	More info → Run anyway; restore from Defender history
Key rejected	Exact purchase email; internet for first verify; contact seller
Forgot admin PIN	Master Reset if configured; else restore backup
Empty P&L graphs	This Month / Date range; Graphs tab; check History

17. Seller: Payhip, variations, GitHub Actions

17.1 Payhip product

- One product: Giftshop POS License with Software License Keys enabled.
- Attach: Windows exe, macOS dmg, optional apk, this PDF.
- Copy Product Secret → GitHub secret VITE_PAYHIP_PRODUCT_SECRET on Giftshop repo.
- Set VITE_PURCHASE_URL to the Payhip product/checkout link.
- Free/trial listing can share the same installers; paid product delivers the key.

17.2 Variations vs LemonSqueezy

Payhip is simpler. Recommended patterns:

- **Single product + license keys** (best): one price, multi-file download, lifetime unlock via key.
- **Multiple products** for add-ons (training, extra site) as separate Payhip products.
- Free product = trial files; paid product = same files + license email. No second unlocked binary required.
- Payhip does not fully mirror LemonSqueezy multi-variant + advanced license API in one SKU — use separate products for complex bundles.

17.3 Build on GitHub (no Mac required)

- Giftshop repo = customer trial builds (do not set VITE_DISABLE_LICENSE).
- Actions → Build Gift Shop POS Releases → Run workflow → download win/mac + setup-guide PDF artifacts.
- Optional Android workflow for APK.
- ownervs repo: variable VITE_DISABLE_LICENSE=1 for your unlocked tests only — never sell those.
- Upload Giftshop artifacts + PDF to Payhip; test one full purchase → activate in app.
